

Public Engagement for Border Safety

IRIS Border Connect™

Enhanced communication tools for actionable intelligence.

- Connect with all travelers effortlessly - no setup or prior knowledge required.
- Provide ongoing emergency information and guidance to your travelers.
- Divert commercial traffic at decision points prior to crossing.
- Empower travelers as your “eyes on the ground” to report suspicious activity.
- Identify precise locations of reported problems.

No app required.

No pre-registration required.

IRIS Border Connect™ - A partnership in safeguarding the border.

Deliver information and guidance to travelers. Receive actionable intelligence from the public.

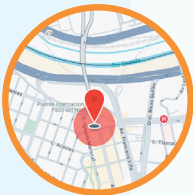

HELP Alerts - Targeted two-way communications for critical event management.

Using WEA and texting, you can provide instructions to the public and receive information from them as the situation develops.

Drivewyze Emergency Alerts - Keep commercial vehicles informed.

Warn commercial vehicles of extreme delays or severe incidents prior to arriving at the border - giving them time to divert and avoid backlogs.

IRIS Locate™ - Pinpoint location of suspicious activity or infrastructure failure.

Obtain the exact location of any event from the public. Location and description can be shared with other officers and responders.

IRIS Eyes™ - Eyes on the ground anywhere.

See live video feeds from other border officials or from the public via any smartphone. Shareable, real-time video with no special software needed by onsite observers.

IRIS AlertNewsStream™ - Border crossing information streaming service.

Hear updated crossing delays/news/special information. Your border streaming broadcast can be accessed by the public via digital assistant requests or by clicking a dedicated URL.

IRIS Incident Relay™ (IR) App - Authenticated users view and submit event updates.

Enables border and customs staff to update event details, upload photos, and stream live video on location.
